

FOURTRUST91 CYBER PROTECTION PROGRAM

Strengthening the Healthcare System Against Cyber Criminals

This is BIG...

According to the U.S. Department of Health and Human Services Office for Civil Rights (OCR), **since 2018 there has been a 278% increase in large breach cyber incidents in healthcare.** Along with the continued threat to healthcare organizations the price of cyber insurance has continued to increase, leaving hospitals and health systems shouldering more of the cost of protection and burden for security.

To meet these challenges and to better protect hospitals, the **New Mexico, Oklahoma, and Texas Hospital Associations** have partnered with **Envision Captive Consultants** to build a cyber insurance and risk management program uniquely customized for hospitals.

We are pleased to announce the FourTrust91 Cyber Protection Program.

Endorsed by the following associations:

New Mexico
Hospital Association

Finally, you can stop looking for better coverage. It's coming to you.

PROGRAM HIGHLIGHTS

The components of this program include:

- **Risk management against cyber criminals** provided by CyberCrashCart™ from Hospital Services Corporation
- **An insurance product backed by an A++ rated insurance carrier,** that will help hospitals get back on their feet after a cyber breach
- **Member collaboration** to learn and implement best practices
- **Potential for members to earn money back** as they improve their cyber risk program
